

Dear Sir -

I am just in receipt of your
note of Sept. 24, having just returned from
the west. The package to which you re-
fer has not as yet come to hand, but is probably
in New York, in the U.S. Eastern Home - as
soon as it comes I will have it sent to you -

Very truly yours
J. Allen

Mrs. Comp. Zoology,

Oct. 14, '73 -

R. longifolia — Lvs. broadish at base, strongly truncate
at the cordate — without glands. (Least lvs. glaucous?)
or elliptic. All lvs ^{marked} undulate in our species than the
foreign, the lower larger, and the valves more strongly curved. —

R. Patriciana — Lvs. broadish above the base, sub-
attenuate or subcordate — more or less gland-
bearing. (Achenium perhaps rather narrower
in proportion than that of R. longifolia.) —

S.W. — July 1874.
